

Messages

Krystal Moore

Edit

I was able to recover them. But after that, I have transferred them somewhere else. Its 1000s of emails, spanning over 2yrs. But what happened this morning was deliberate. I don't have a weak password. A passive program couldn't have gained access. More disturbingly, is that I couldn't communicate with my clients this morning and forward docs electronically. And I have to fiercely protect their interests.
